

ΣTS Cross-Application
Forecast Engine
(CAFE™)

Introduction

The Cross-Application Forecast Engine (CAFE) is an online analytical module based on the revolutionary SaaS (Software as a Service) concept. It allows users from various industries and business domains to import their data and perform accurate forecasts without needing to have any knowledge in mathematical models and data analysis procedures. CAFE allows small and mid-sized companies, with limited budget, to take advantage of the power of business analytics to enhance productivity and revenue without needing to allocate resources (time & money) to develop and maintain custom IT solutions.

Benefits

CAFE offers the following benefits:

- Performing efficient business analytics without needing to learn the underlying methodologies and algorithms.
- Optimizing the forecast results by choosing the optimal model among all supported mathematical models.
- Benefiting of advanced predictive analytics without needing to implement and support IT resources (SaaS model).

Features

CAFE provides the following features:

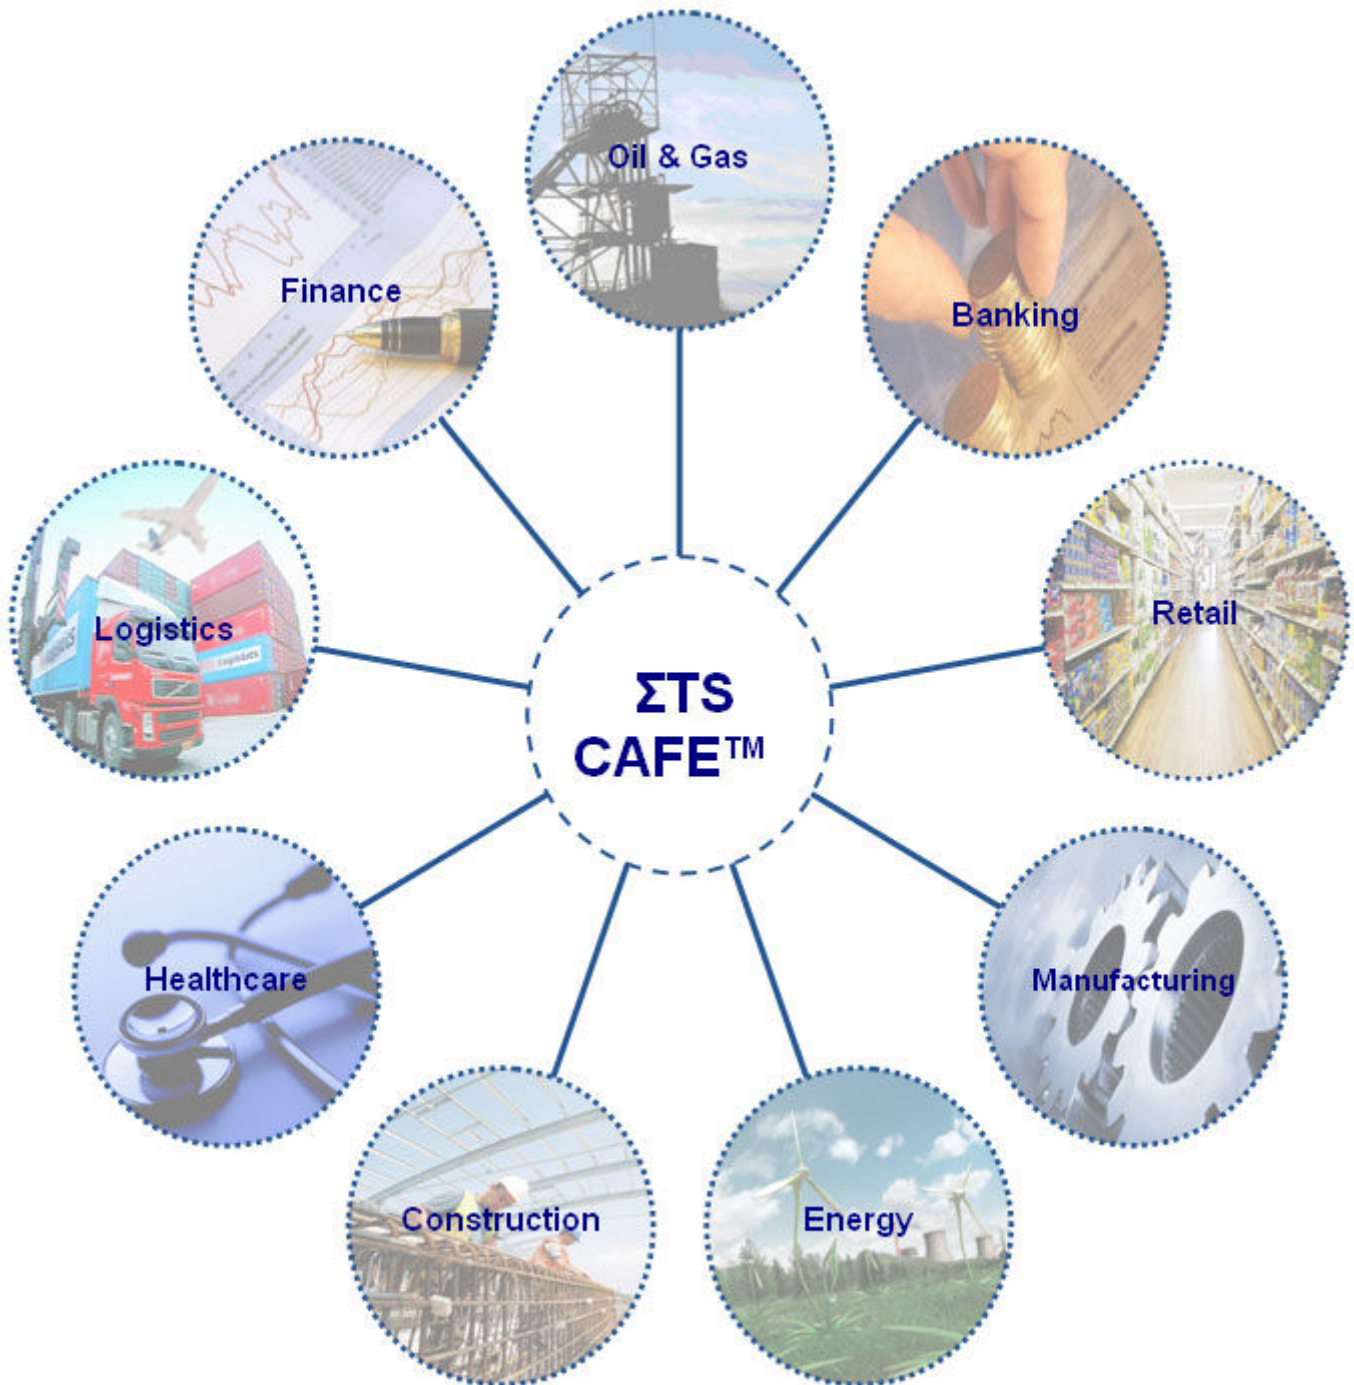

- Embedded data cleansing and manipulation module: which analyzes the data and performs necessary enhancements without any user intervention.
- An intelligent forecasting module: which analyzes the data and suggests the optimal model based on its specifications.
- Advanced visualization module: the user can interpret the forecast result using a comprehensive and intuitive interface.
- Model accuracy module: which measures the accuracy of the chosen model and suggests possible enhancements or alternatives.

Enterprise Edition

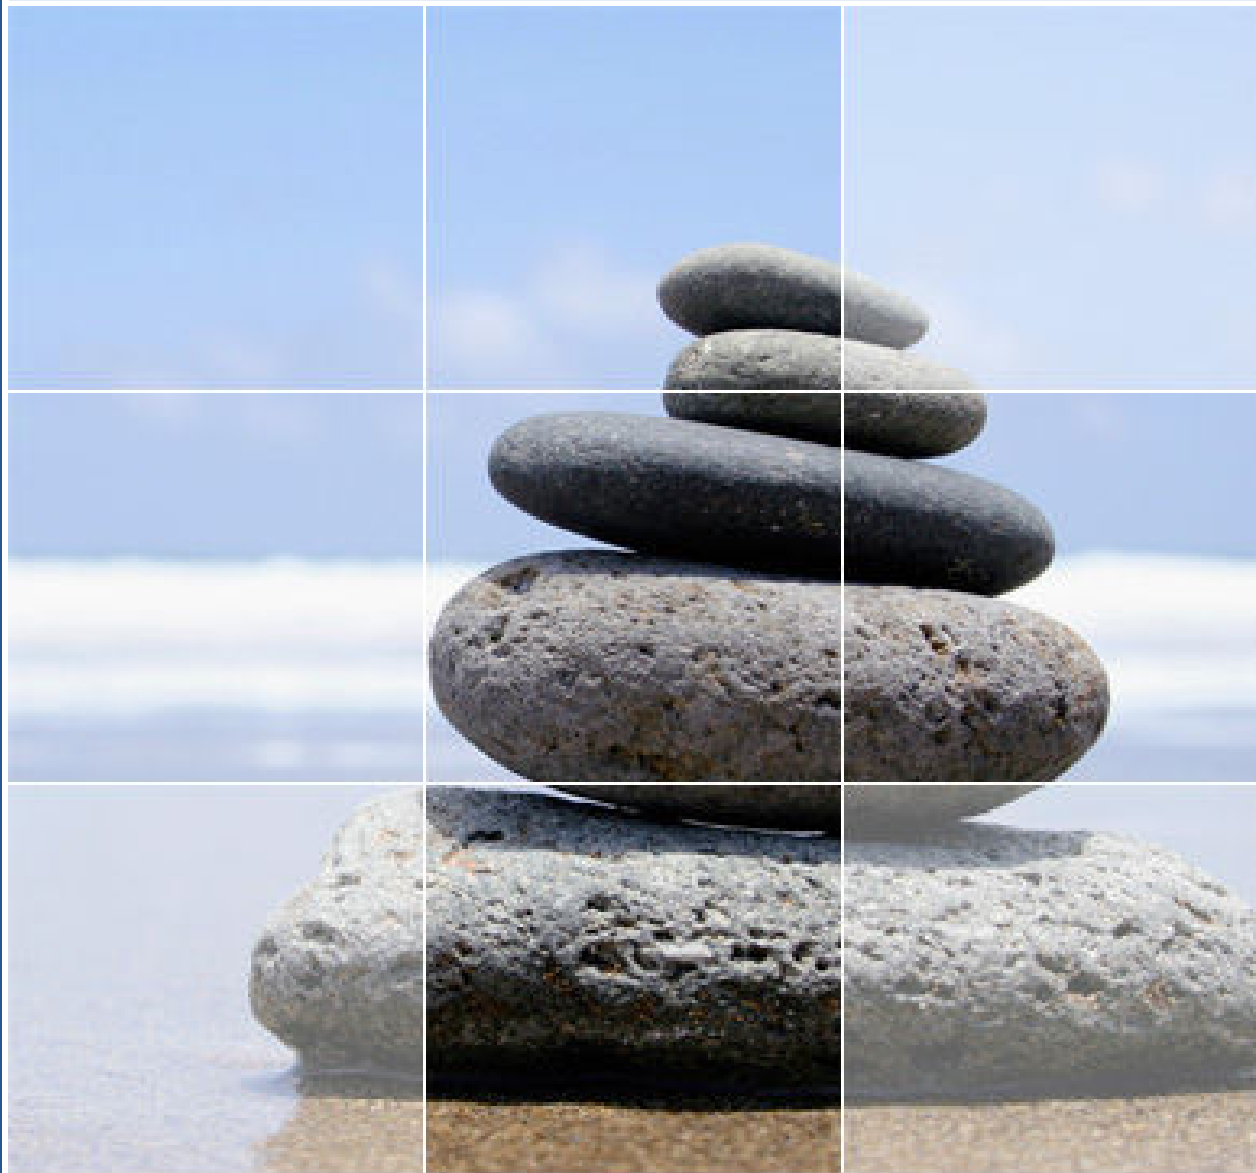

Beside the SaaS version of CAFE, an enterprise service is offered for large firms and industries to target the following aspects:

- Customized forecast solutions taking into consideration exceptional business requirements and procedures.
- On-site analysis and implementation of the custom solution.
- Solving business-specific optimization problems.
